# Woodburning

<i>Product Name:</i>	<i>CTVWC#:</i>	<i>Price:</i>
----------------------	----------------	---------------

<b>Optima #1 HD Large Skew (PH1)</b>	<i>WB-008</i>	<b>\$19.95</b>
--------------------------------------	---------------	----------------

Good for running quill lines, and burning larger feathers (like on life sized geese or eagle feathers). The longer blade burns long even lines, but turning radius is very limited.

<b>Optima #10 Small Skew - STD (PS10)</b>		<b>\$19.95</b>
---	--	----------------

Great for the miniature carver or anyone that needs to do small fine detailed work.

---

<b>Optima #11 HD Med Skew (PH11)</b>	<i>WB-031</i>	<b>\$19.95</b>
--------------------------------------	---------------	----------------

A little smaller than the Large Skew (1), has many of the same uses. Has a better turning radius & is stronger than the Large Skew (1).

---

<b>Optima #11 STD Med Skew (PF11)</b>	<i>WB-030</i>	<b>\$19.95</b>
---------------------------------------	---------------	----------------

A little smaller than the Large Skew (1), has many of the same uses. Has a better turning radius & is stronger than the Large Skew (1).

<b>Optima #12 HD Rounded Skew (PH12)</b>	<i>WB-033</i>	<b>\$19.95</b>
--	---------------	----------------

Like the the small skew, but can turn a corner real easily. This is the most popular pen that we sell. Get this one and the #18 when ordering one of the Cheryl Dow books!

**Optima #12 Micro Round Skew (PH12S) WB-055 \$19.95**

---

**Optima #12 STD Rounded Skew (PF12) WB-032 \$19.95**

Available now. An even smaller version of the ever popular number twelve pen tip. Song bird carvers will really like this pen, especially in the ultra fine version (fine pens tend to be even smaller than the HD ones shown).

Available in extended version.

**Optima #13M HD Scale/Shader (PH13) WB-038 \$19.95**

What originally started out as a Cheryl Dow design for flat work pyrography, was changed slightly via Scott Clinton to become a fish scale pen also. This tip is available in small, medium, or large sizes. The medium size (Shown here) is probably the most versatile for most carvers and flat work pyrographers.

**Optima #14HD RH Feather Edger Guge ( WB-041 \$19.95**

This pen design is from Bob Guge. Anyone who has taken a class from him has probably made one. Great for burning in primary's, or anywhere you would otherwise use a pen to burnish or depress wood. Instead of depressing and moving the pen for each area along a line "like you would do with other pens", this pen is designed to act like a ski. Just put it at the start of your feather edge, and follow it. Saves you a lot of time. I recommend getting this one in the Heavy Duty Style, as it will stand up to the rigors of burnishing with a pen of this design.

---

**Optima #15 HD LH Feather Edger Bent ( WB-043 \$19.95**

This pen design is from Bob Guge. Anyone who has taken a class from him has probably made one. Great for burning in primary's, or anywhere you would otherwise use a pen to burnish or depress wood. Instead of depressing and moving the pen for each area along a line "like you would do with other pens", this pen is designed to act like a ski. Just put it at the start of your feather edge, and follow it. Saves you a lot of time. I recommend getting this one in the Heavy Duty Style, as it will stand up to the rigors of burnishing with a pen of this design.

---

**Optima #17 HD Hair Burning Pen (PH17 WB-046) \$19.95**

This tip is used to make hair on your caricature or mammal carvings, instead of using a tear-drop shaped dremel bit, or micro-V hand gouge. Obviously, you may still need these other tools for wider furrows, but this pen will make short work of the medium to finer sized hairs on your carvings (up to 1mm wide). This tip is only available in heavy duty style, as its design requires a thicker tip wire. It can also be used to do fine hair/feather work, where you can adjust the width and depth of a line by just pressing harder (rather than increasing your heat settings). As this pen tip has a limited "choke point" in it, it may tend to get more heat to the pen body.

---

**Optima #18 HD Spear Point shader (PH1 WB-049) \$19.95**

This new shader looks a lot like the #5 spear point, but has squared off edges (not sharpened), and it is bent at a 45 degree angle for shading. Great for when you need to shade an area that's in a tight spot.

---

**Optima #19L HD Ball Tip 1/10" (PH19L) WB-052 \$19.95**

---

**Optima #19L HDXL Ball Tip 1/8" (19LH WB-053) \$19.95**

---

**Optima #19M HD Ball Tip 5/64" (PH19 WB-051) \$19.95**

---

**Optima #2 HD Sm Round (PH2)**                      *WB-010*                      **\$19.95**

Good for concave areas such as under necks. Good for not leaving a depression from the point. Can also be used for "stippling".

---

**Optima #2 STD Sm Round (PF2)**                      *WB-009*                      **\$19.95**

Good for concave areas such as under necks. Good for not leaving a depression from the point. Can also be used for "stippling".

**Optima #3 HD Large Round (P3HD)**                      *WB-012*                      **\$19.95**

Same as small round, just a bit larger diameter.

---

**Optima #3 STD Large Round (PF3)**                      *WB-011*                      **\$19.95**

Same as small round, just a bit larger diameter.

---

**Optima #5 HD Spear Point (PH5)**                      *WB-016*                      **\$19.95**

Good for getting into tight places like under wings, and for under cutting. Can also be used to make a fuzzy raised hair on flat work or mammal carvings. Available in extended version.

**Optima #5 STD Spear Point (PF5)**                      *WB-015*                      **\$19.95**

Good for getting into tight places like under wings, and for under cutting. Can also be used to make a fuzzy raised hair on flat work or mammal carvings. Available in extended version.

---

**Optima #6 Chisel Tip - Std - PS6** **\$19.95**

---

**Optima #6 Chisel Tip HD (PH6)** **\$19.95**

Some carvers prefer this for running quill lines.

**Optima #9 HD Mod Writing Tip (PH9M) WB-027** **\$19.95**

Used for writing your name on your carvings. As there is no "choke point" in the tip, it does tend to heat up the pen body more than most pens.

---

**Optima #9 HD Mod Writing Tip Small (P)** **\$19.95**

Very similar to the standard #9, but has the end of the tip ground symmetrically, and the end is perfectly round. This is a good choice when you need it for more than just signing your work like for "Pointillism" or drawing, and the "choke point" created at the end of the tip also keeps the pen body much cooler for much longer than the standard #9 pen does. The end of the tip for the 9M pen is about 0.040" in diameter (1mm), and about 0.030" (3/4mm) diameter for the 9MS pen. Look at the #19 pens if you want something similar but bigger.

---

**Optima #9PP Pin Point Tip** **\$19.95**

Another variation of the #9 & 9M, but it has been ground so that it comes to a sharp point. Good for when you need to do very fine dots or fine surface lines. It is sharp, so you may need to sandpaper the tip down a little bit to your liking.

---

**Optima Buffing Pads** *WB-006* **\$1.95**

---

**Optima Foam Grips** *WB-005* **\$1.00**

**Optima HD Cord** *WB-004* **\$11.00**

---

**Optima LD Cord** *WB-003* **\$9.50**

---

**Optima #13 Shader/Scaler Large (PH13L)** **\$19.95**

**Optima #13 Shader/Scaler Small (PH13S)** **\$19.95**

---

**Optima #2 Small Round Shader (PH2B) \$19.95**

---

**Optima #7 HD Rounded Skew (PH7) \$19.95**

A variation of the Medium Skew, tip is rounded at both the point and heel.

**Optima Detail Master Adapter HD**      *WB-007*      **\$10.95**

---

**Optima Dual Set \$149.99**

Complete Package, dual unit, two cords and two pens

---

**Optima Single Set \$109.99**

Complete Package - One single unit, cord and one pen.
